Overview – Climate Living Labs

Hybrid spaces where climate action flourishes from small gestures—a seed, a waste, a game—transforming individual awareness into collective regeneration systems.

- Living laboratories that blend innovation, community engagement, and sustainable practices in real-world settings
- Creating platforms where citizens, organizations, and experts collaborate on climate solutions
- Formats include urban gardens, waste-to-resource workshops, gamification challenges, and community-led renewable energy initiatives
- **Carolina Hedman / Climate Pact Swedish Ambassador**

Hybrid spaces where climate action flourishes from small gestures—a seed, a waste, a game—transforming individual awareness into collective regeneration systems.

In Climate Living Labs, we not only talk about the climate: we cultivate it. We create spaces where education, technology and local creativity come together.

From Seed to System

Living Spaces

These are places where ideas sprout like seeds—nurtured by creativity, rooted in science.

Everyday Transformation

A reused coffee bean or a child planting a virtual tree explore the climate intersection.

Collaborative Action

We prototype new ways of living, learning and regenerating—together, organically and systemically.

Our Foundations

Mission

Create hybrid (physical and digital) spaces, co-design circular and educational climate solutions, and scale the impact from micro-gestures to macro-impact.

Approach

Small actions (seed, waste, play) that transform individual awareness into collective regenerative systems.

Priority SDGs

4 (Education), 12 (Responsible Production and Consumption), 13 (Climate Action), 17 (Partnerships).

Philosophy

"From Waste to Consciousness", cultivate living systems of care, courage and creativity.

Pillars of the Climate Pact

Promote individual actions, connect local communities, support long-term commitment, make the invisible visible.

Requirements for Participating Spaces

Joint Organisation

Commit to co-organising a minimum number of CLL events/workshops per year (4).

Promotion

Actively disseminate CLL activities through their communication channels.

Participation

Designate a contact point or small team to coordinate with the CLL.

Basic Reporting

Share simple metrics of participation or impact of the events held in their space.

Adherence to Principles

Agree to operate under the principles of the European Climate Pact and the CLL philosophy.

Benefits and Activities for Participants

The spaces associated with the Climate Living Lab receive recognition and can implement various educational and practical activities:

EXAMPLE:

Official Distinction

"Affiliated Hub to the Climate Living Lab of the European Climate Pact": An official recognition for your communication, including a joint logo and presence in official materials.

"From Waste to Resource" Workshops

Co-organise practical workshops on composting, upcycling, repair and transformation of waste into valuable resources.

Climate Gamification Challenges

Launch small challenges for your community with tracking and symbolic prizes that motivate climate action.

Benefits and Activities for Participants

Inspiring and Educational Talks

Sessions on climate topics, circular economy and SDGs, aligned with Sustainable Development Goal 4 (Quality Education).

Co-design Sessions for Local Solutions

Utilise spaces for community brainstorming where participants collaborate to develop solutions tailored to local needs.

Collection/Exchange Points

Dedicated spaces for specific items like books, clothes and small electronics to repair, promoting the circular economy.

Climate Living Lab Certificate /Example :

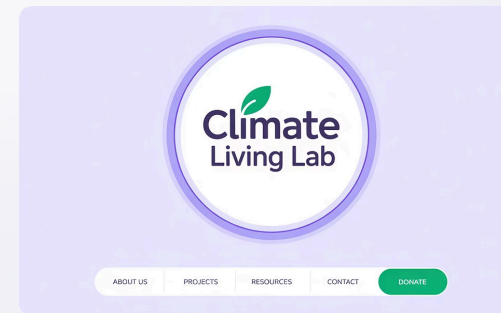

Official Recognition

Formal certification acknowledging sustainable practices and climate action commitment

Lighthouse Status

Certified spaces serve as sustainability beacons in their communities

Digital Badge

Online identifier showcasing Climate Living Lab network membership

Network Benefits

Access to knowledge sharing and collaboration opportunities

CLIMATE PACT AND THE SDGs

Contribution to the European Climate Pact

Climate Living Labs aligns with the four pillars of the European Climate Pact:

1. **Promote individual actions** Through everyday gestures (such as reusing a coffee cup) that transform into regenerative habits.
2. **Connect local communities** We create hybrid ecosystems where people co-design solutions from their own territory.
3. **Support long-term climate commitment** Through Coaches4Climate and methodologies that develop resilient leaders with a future-oriented vision.
4. **Make the invisible visible** We use XR, data and gamification to show how every small gesture impacts the planet.

Priority SDGs (Sustainable Development Goals)

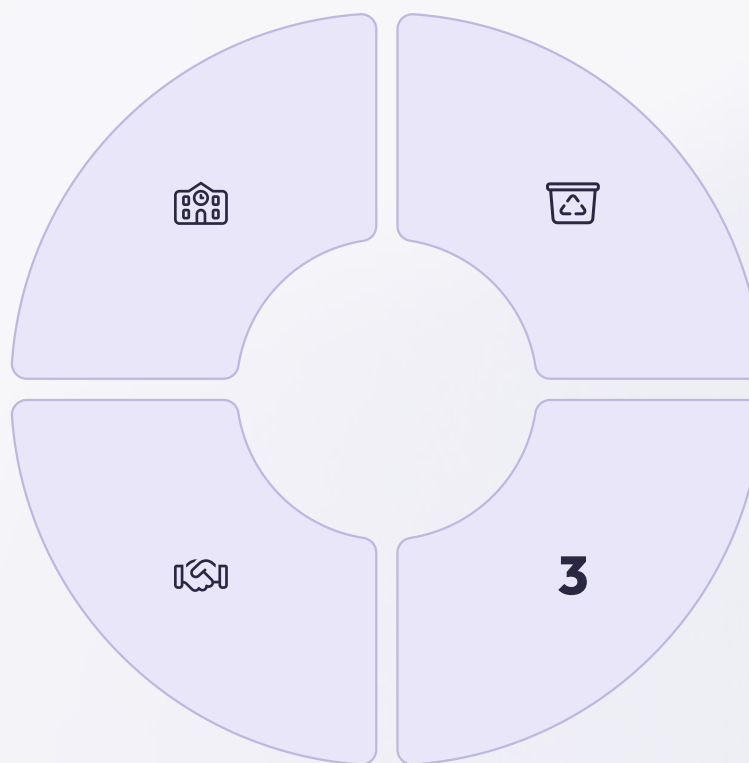

Our commitment to the Sustainable Development Goals is focused on four fundamental and interconnected areas:

SDG 4 – Quality Education

We promote inclusive and quality learning through hybrid and playful models.

SDG 17 – Partnerships for the Goals

We invite foundations, governments, companies and citizens to collaborate as sponsors, trainers or facilitators.

SDG 12 – Responsible Production and Consumption

Creative reuse, circular economy, transformation of waste into resources.

SDG 13 – Climate Action

Systemic climate action based on community participation, emotional education and emerging technologies.

Whats App: +46 79 038 17 67

Northern Sweden, especially Norrbotten, faces urgent environmental challenges: rising temperatures, biodiversity loss, and rural depopulation threaten communities dependent on fragile ecosystems. *Climate Living Labs – From Seed to Shift* answers this crisis by creating hybrid hubs—physical and digital—where citizens, scientists, and organizations co-design solutions for circularity, regeneration, and resilience.

The project mobilizes over 250 local actors across six municipalities, targeting reforestation (10,000 native trees annually), composting (20 tons of organics per year), and biodiversity monitoring with advanced digital tools (XR, drones, traceability systems). It engages schools, NGOs, and local authorities, empowering youth and women through hands-on restoration, environmental education, and participatory science.

By transforming daily practices in waste, food, and energy, the initiative not only restores natural habitats but also builds community capacity for lasting climate adaptation. Over three years, it will directly benefit more than 4,000 rural residents, produce an open-source digital playbook, and create a replicable model for other regions in Europe and Latin America.

Endorsed by the EU Climate Pact Secretariat, our ambassador network spans both continents, facilitating knowledge exchange and scaling impact. As Swedish Climate Pact Ambassador appointed by the European Commission, I leverage experience since 2023 with local partnerships and my expertise in digital innovation to unite technology and ecology.

The project advances the UN Sustainable Development Goals—SDG 13 (Climate Action), SDG 15 (Life on Land), and SDG 5 (Gender Equality). *Climate Living Labs* is a pioneering blueprint for regenerative living—empowering northern communities to restore ecosystems, protect biodiversity, and inspire scalable climate solutions across regions.

Every act, no matter how small, becomes part of a regenerative future we grow together."

Let's Grow Together

Living Systems

We don't build laboratories. We cultivate systems of care, courage and creativity.

Layers of Impact

From a single seed to a virtual forest, from a workshop to a certified coach.

Join the Movement

As a sponsor, mentor or believer. Every contribution matters.

Carolina Hedman / Climate Pact Swedish Ambassador caro@dotswe.com

Whats App: +46 79 038 17 67

Call for Sponsors

Local Certifications

Fund training for climate coaches, especially in underserved regions.

Physical Infrastructure

Support the equipment, materials and design of the Labs.

Digital Development

Contribute to gamification, metaverse and data traceability.

Co-creation with Purpose

Co-brand events, prototypes or climate learning modules.

We are looking for strategic allies who believe that: education + creativity + local action = real climate impact.
